

ELEKTRA RASTER

Electric fences without insulators

The COLUMBUS electric fence **Elektra Raster** is especially for big pastures a great and reasonable solution. Our **Elektra Raster** fence consists of solid vinyl posts through which a thin electric strand is threaded. Insulators and external fixation clips are not necessary any longer thus making equine husbandry easier and safer. The thin electric strand hardly wears and doesn't need to be strained for a couple of years.

Available with round or square posts

The posts are manufactured from a high-quality, uv-resistant vinyl and are very solid and low on maintenance – no more rotting or chipping paint.

Outstandingly suitable for big pastures!

ELEKTRA RASTER

Electric fences without insulators

The **Elektra Raster** fence can be combined perfectly with our **Ranch Fence** or **Artwood Fence**.

Electric fencing can be used for example in front of the upper rail or instead of a third rail at the bottom. No more insulators that can rust and break off.

COLUMBUS offers also a complete assortment of electric fencing for your pasture fences. Your electric fence can only work properly when it is set up in the right way. We have skilled employees with the necessary know how to give you a hand with your fences. If you prefer to set up the fence yourself we provide you with a manual and are only a phone call away if you have further questions.
