

STABLES AND STALLS

In the matter of building stables, stalls, pasture shelters, stable windows and other horse stable related matters COLUMBUS is the right partner for you.

STRONG and ROBUST, SAFE and FUNCTIONAL, DURABLE but also AESTHETIC that is what stables should look like.

- Strong and robust - since it is necessary for horses
- Safe – because the well-being of horses has to be placed first
- Functional – in order to muck out easily and efficiently
- Durable – since this investment is expensive enough
- Last but not least aesthetic – because you need to feel comfortable every day

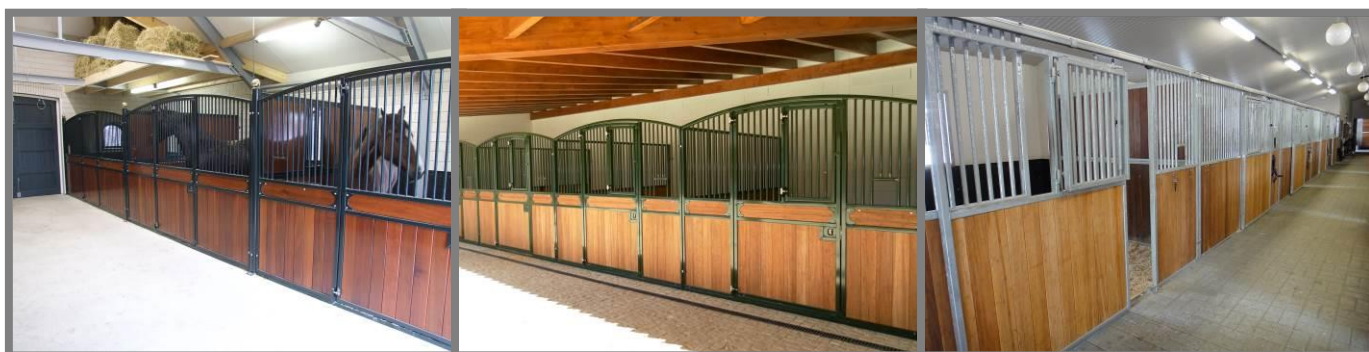

Initially we offer 3 different types of stalls which are available in different sizes:

- Mare stall: Height 220cm, Thickness of walls 28mm and bars 22mm
- Stallion stalls: Height 240cm, Thickness of walls 38mm and bars 28mm
- Special: exclusive stalls, fitting the design of your stable

The sliding doors are suspended from heavy passing rails with double rollers. The COLUMBUS stalls consist of loose walls and are therefore easy to assemble and disassemble. On request we also deliver the steel parts with powder coating in the colour of your choice.

Of cause, we also supply accessories such as feeding troughs, automatic waterers, hay feeders etc.

STABLES AND STALLS

Both mare and stallion stalls can also be delivered as external versions. Our external stalls are delivered as construction set.

We are happy to advise you on planning and execution, even if you need a complete set up of your stable. In order to get a picture of the different possibilities we are happy to invite you to visit one of our demonstration stables – please contact us for an appointment.
